Subject to Receive Their

mines in the United States, Alaska and Mexico annually than any other organization.

When seen by The Tribune Thursday morning, Mr. Holden said that he was on his way from Alaska, where, accompanied by D. C. Jackling, he made an examination of some jarge gold properties for eastern interests. Mr. Holden was not willing at this time to discuss the visit of the probable outcome of this much discussed inspection at his own and Mr. Jackling's hands.

He is in Utah at this time for the purpose of getting in closer personal touch with the western affairs of the company, and this is his first visit to Salt Lake within a year and a half. He expects to be here at least two weeks.

An idea of the activity of the United States company in the search for new mines can be had from the recent annual report, in which Mr. Jennings told of having examined during the fiscal year 321 properties, of which only one was purchased during that period.

NEW DRAIN TUNNEL IN THE COTTONWOODS

President and General Manager Greene of the Tar Baby company was in the city yesterday from the Big Cottonwood section, and among the interesting bits of information brought with him was the fact that the Big Cottonwood canyon has been gone over presty thoroughly of late by surveying forces in the reported effort to outline a new drain tunnel, supposedly by the Michigan-Utah Consolidated interests.

The surveyors have started at the old Maxfield mine and proceeded thence up the canyon to the Michigan-Utah and other properties, a distance of six or seven miles. The new tunnel would likely start above the Maxfield, about five miles below the old Utah Mines Coalition property, and driven from that distance to the objective point.

Such a tunnel, it is stated, would not have to wait for the total five miles distance before getting into ore, as it is figured that enough ore would be encountered on the way to meet all the expenses of the work. Should this tunnel be driven it will be one of the greatest repetits ever attained by that richly mineralized section, for it would get a very great depth on demonstrated ore bodies of tremendous value.

In regard to the Tar Baby work, Mr.

There was a report current yesterday to the effect that the American Smelting & Refining company was considering the removal of the lead smelter now located at Murray, Utah to some location in another part of the county or state. No confirmation or denial of this report could be had last night, but one in a position to know asserted that the fact that the company is now spending a great deal of money on the plant, increasing the capacity and general efficiency of the plant, should be pretty conclusive evidence of the fact that no removal to another spot is contemplated. It looks as though this is another rumor that has gone wrong. Swan Con .

MORE CONFIDENCE IN THE MARKET SUPPORT

James A. Pollock & Co., bankers and brokers, furnish the following, received over their private wire yesterday after-

over their private wire yesterday afternoon:

Paine, Webber & Co. Boston.—The action of New York list today showed able
leadership and confident buying. Large
and small traders sold stocks on the rally
at the opening and continued taking
profits all through the session, but the
buying was so aggressive that all offerings were quickly absorbed and the close
showed the highest prices for the day.
The local coppers were slower to move
and showed only fractional advances.
Butte & Superior was the most active
stock, advancing quickly at the opening
to 44 and remaining frequently under that
price the rest of the session.

Sales of the metal at 17% are being
freely made for September and October
delivery and an early advance is expected. We look for the local coppers to
have a sharp upturn under the lead of
Amalgamated, which should do better tomorrow.

Democratic leaders close to Wilson

Amagamates, which should be conservative morrow.

Democratic leaders close to Wilson state that his letter will be conservative and a strong point will be made of the fact that any changes in the tariff must be made slowly in order not to injure business which, he says, is entitled to all the protection that the government can give it.

the protection that the government can give it.

Logan & Bryan, New York.—The stock market was buoyant with considerable buying of a substantial character in evidence. Sentiment was rather cheerful, owing to the fact that President Taft's letter was in keeping with the general expectancy, and not suggestive of a return to radicalism. In addition it was said quite authoritatively that Mr. Wilson's stitude, especially with regard to the tartifude, especially with regard to the tartifude, a such as is not likely to produce a feeling of greater concern in commercial and industrial fields, so that on the whole the course of the security prices today might have been construed as being in response to a moderate clearing of the political aspect.

Railroad earnings as published denoted betterment and, of course, the crop news

betterment and, of course, the crop new

SUBJECTED TO LOSS

Plainly Stated in Protest to Senator Smoot.

IS IMPERATIVE

Tonight Will Have

Subject to Receive Their

Attention.

The arrival on Thursday of several of the highest of the same of the form of

Word was given out during the winter that at a conference with the secretary of the interior, in which you participated, an agreement was reached to support a measure providing for a commission whose duties would be to take testimony and report needed changes in the mineral land laws, with a view towards their general revision.

Would it be out of place to ask whether any definite action has been obtained along these lines? Was there a tacit agreement that this commission should be made up of men actually engaged in the mineral industry, or do we face the probability of being obliged to deal with a commission of conservation-mad extremists?

In spite of knowledge of the crude

commission of conservation-mad extremists?

In spite of knowledge of the crude and faulty details of the existing mineral land laws, western mining men have borne with them rather cheerfully, because, beginning with the act of 1886, the statutes recognized and confirmed the rights that had been acquired under local rules, and because they were based on the principle that all mineral lands of the public domain should be free and open to exploration and occupation, and that titles to mineral deposits or the lands containing them would be granted by the government.

Disregard of Law.

But in recent years, one ruling after another by the executive branch of the government has tended to overturn what we considered the fundamental principle of the law: until at last we have the revolutionary ruling by the department of the interior in the East Thitic case. I take it that from this ruling a prompt appeal will be made to congress, but cannot guess whether it will be met with a piece of parchwork legislation that will meet the difficulty, or whether it will force the Issue for a general revision of the mineral land laws. Is not a great deal going to depend on the makeup of the proposed commission?

Once before, during President Roosevelt's administration, a public lands commission was appointed, to report on the operation and effect of the existing land laws.

lands commission was appointed, to report on the operation and effect of the existing land laws. The commission was made up of the menthen holding office as director of the geological survey, as commissioner of the general land office and as forester; and although it did make some reports and recommendations with reference to sgricultural lands, no report on the mineral land laws was ever forthcoming, for the reason that the commission was hopelessly unable to come to any agreement.

Some Glaring Abuses.

Some Glaring Abuses.

Your bill to do away with the extralateral right in future mining tities meets with general approval as far as it goes; but it hardly touches worse secondary evils. It is for the sake of the extralateral right that lode locations must have peculiar shape; if the claimant chooses to have them surveyed, they must be surveyed according to peculiar rules; and if the claimant chooses to apply for patent, a peculiar and cumbersome routine is prescribed. In one way and another, the law was so loaded down with cumbersome provisions that the law-makers themselves seem to have recognized the routine as being both cumbersome and burdensome, and out of regard for the poor claimowner who could ill afford the outlay for that sort of thing, the law did not require him to go through it unless he chose to do so.

As matters now stand, the exact

lay for that sort of thing, the law did not require him to go through it unless he chose to do so.

As matters now stand, the exact boundaries and rights of lode locations may be left in loose indefinite state for an unlimited period of time without any record at all in the United States land office; and as time goes on, it becomes more and more difficult to find out what lands are held under a valid right. There is no time within which a claimant is obliged to define his rights fully by having his claim surveyed or mapped or by making final proof of any sort. He is not even required to use due diligence towards maintaining his location corners. Proof of common laxity in the matter of corners and discovery monuments is to be found in official notes, filled in the land office, of mining claims surveyed for patent; these notes show that in a surprisingly large number of cases the location corners could not be found by the surveyor at all, or were not in the places contemplated by the notices.

Law Suit Breeder.

Law Suit Breeder.

The final result in every active mining district is a tangle group of conflicting locations, whose rights, when any valuable ore deposit in involved, must usually be determined by law-sults as expensive and as distressing as the stakes are high. In order to get around this state of affairs, and to determine whether they have even preferential rights as against other possible unknown locators, prudent claimants have preferred to go through a natent proceeding in the land office, because a patent from the government becomes evidence that title to the location has been quieted, after due notice to everybody concerned. The patent confers no new rights, but merely certifies the rights already acquired through appropriation and development.

On top of all this, however, comes the ruling of the department of the interior, which practically denies the right of a claimant to go through the only proceeding by which he can make sure whether he really has any rights at all. If the purpose of the ruling had activally been to unsettle titles, to dis-The final result in every active min-

courage investments and to retard development of latent resources—in short, if the purpose of the ruling had actually been to bring about complets chaos—it is hard to conceive of anything that could have accomplished the purpose more effectively.

One Possible Remedy. Would it not be possible to get an amended ruling from the department of the interior, whereby an entry such as that of the East Thitic company, would not be canceled 'In its entirety," but would be allowed to stand, subject to later additional proof of the existence of valuable ore deposits? This would at least give preferential rights to a claimant, so as to justify expenditures for additional work. I suggest this expedient, not as wholly satisfactory, but because I do not imagine that the department will revoke its decision upon anything short of mandatory legislation; and I know that legislation requires time. know that legislation requires time.

CHEMUNG WILL BE SOLD THIS MONTH

If the eastern sources of the information are to be relied upon, and the news comes straight from headquarters evidently, the Phelps-Dodge interests within a few weeks will be the owners of the Chemius property, which is one of the new porphyry copper propositions of the southwest. Phelps-Dodge & Co. have made an offer of \$1,350,000 for the property, which is equivalent to \$5 a share net to stockholders. The Chemius will hold a meeting on August 15, at which this offer will be considered and in all probability accepted.
